

Exercise 4

1.	Write a Python script to extract a course number, code, and name from the following text using regular expressions: <pre>CoursesData = """101 COM Computers 205 MAT Mathematics 189 ENG English"""</pre>
2.	Write a Python script to extract each course's details in a tuple form from the following text using regular expressions. In addition, use regular expressions to retrieve string values in the CoursesData and then retrieve numerical values in CoursesData.
3.	Write a Python script to extract digits of size 4 and digits of size 2 to 4 using regular expressions.
